SUMMARY

AI Engineer specializing in prompt engineering and LLM-powered applications for Indonesian business contexts. Currently building and deploying AI agents at Aksoro using Claude API, n8n, and Cekat with a data science foundation in Python, SQL, and predictive modeling. Focused on translating business requirements into reliable, production-ready AI systems.

EDUCATION

Hacktiv8 Bootcamp

Data Science Program

Jakarta, Indonesia

01/2026 - 04/2026

Universitas Muhammadiyah Yogyakarta

Bachelor of Informatics (GPA 3.43/4.00)

Yogyakarta, Indonesia

2021 – 2025

WORK EXPERIENCE

Aksoro (PT Aksara Juara Nusantara)

AI Prompt Trainer & AI Engineer

Yogyakarta, Indonesia

June 2026 – Present

- Engineered and deployed LLM-powered AI agents for 10 SMB clients using Claude API, Cekat, and n8n, automating up to 80% of client communication workflows. .
- Designed production system prompts and Knowledge Source architecture, enabling accurate, context-aware responses across diverse business verticals.
- Built an automated QC pipeline to evaluate AI agent response quality at scale, flagging inconsistencies and hallucinations for review and cutting manual QA effort.
- Debugged and optimized prompt logic to reduce response inconsistencies and hallucination incidents across multi-turn conversations.
- Translated client business requirements into deployable AI agent configurations, covering conversation flow, escalation logic, and QnA structures.

Damirich

Database Administrator Intern

Yogyakarta, Indonesia

December 2023 – May 2024

- Designed and maintained relational database schemas across 5+ core tables, supporting data normalization and system integration.
- Wrote and optimized SQL queries for data validation and extraction, ensuring data quality and consistency for downstream use.

Universitas Muhammadiyah Yogyakarta

Assisted lecturers

Yogyakarta, Indonesia

September 2022 – July 2023

- Mentored 30+ students in SQL query writing, indexing, and relational database design.
- Developed practice exercises covering joins, normalization, and query optimization.

SKILLS

AI & LLM : Prompt Engineering, RAG, LLM Fine-tuning, Claude API, OpenAI API, LangChain, Function Calling, Multi-Agent Systems.

Automation : n8n, Cekat, API Integration, Workflow Automation.

Languages : Python (proficient), SQL (advanced).

Tools: Git, Docker, Jupyter, VS Code.

PROJECTS

[WhatsApp AI Chatbot for SMBs — Universal n8n Template](#)

Jul 2026

Built a reusable n8n workflow template that turns a WhatsApp Business number into an AI customer service agent for small businesses. Handles product Q&A with conversation memory, detects complete orders and logs them to Google Sheets, notifies the owner in real time, and runs automated follow-ups on inactive leads.

All client-specific values are isolated in a single config node, reducing new-client onboarding to under 30 minutes. Open-sourced with full setup documentation and architecture notes.

Technology / Tools: n8n, WhatsApp Cloud API, Claude API (Anthropic), Google Sheets, Webhooks, JavaScript.

[ApplyIO — AI Job Application Assistant](#)

May 2026 – Jul 2026

Automated the slowest part of job hunting: matching a resume to relevant roles and writing a tailored cover letter for each. Users upload a resume (parsed client-side), set a target role, and an n8n AI pipeline scores the matches and generates each letter. Results save to Supabase and surface on a live dashboard with match-score meters and one-click copy.

Technology / Tools: React 19, Vite, pdf.js, mammoth, n8n, Supabase, LLM.

[TalentScout — AI Recruitment Pipeline](#)

Jun 2026

Objectified CV screening with LLM inference: extracted structured data from resumes and ran real-time gap analysis against job requirements. A weighted scoring engine (40% hard skills, 30% experience, 20% education, 10% achievement) returns a suitability score, and the system renders HTML dashboards with candidate comparisons and interview recommendations.

Technology / Tools: Python, LLM Inference, Prompt Engineering, AI Workflow Automation, HTML.

[Clickbait Detector](#)

March 2026

Trained an LSTM on 32k balanced English headlines to flag clickbait, reaching 98% accuracy and 0.99 precision on the clickbait class. Deployed as a Streamlit app on Hugging Face Spaces for live testing.

Technology / Tools: Python, TensorFlow, Keras, LSTM, Streamlit, Hugging Face.

CERTIFICATIONS

Anthropic

AI Fluency Framework & Foundations

Certificate: [e97e2vkv2iba](#)

Issued on May 2026
